Elon Musk Reveals New Cybertruck Camper

Elon Musk has created a new RV version of the Cybertruck, with a removable camper pod.

During a recent interview, Elon Musk introduced the new Cybertruck RV, which features a removable camper pod, and which is available in several different camoflauge patterns, (as well as the original finish). Musk said that customers had been asking for a Tesla RV since the introduction of the Cybertruck, and this new design allows any Cybertruck owner to simply drop in the camper pod, which has the same futuristic styling as the truck.
